lad_rel

Survey question: Q4. Now imagine this same ladder, but **think of this ladder as representing where people stand in the United States**. At the **top** of the ladder are the people who are the best off – those who have the most money, the most education, and the most respected jobs. At the **bottom** are the people are the worst off – those who have the least money, least education, the least respected jobs, or no job. The higher up you are on this ladder, the closer you are to people at the very top; the lower you are, the closer you are to people at the very bottom. Please identify where you think you stand at the time in your life relative to other people in the United States.

TECHNICAL VARIABLES

svy_year

Label: Survey Year

Value	Label	Unweighted Frequency	%	Weighted %
2021	2021	4014	100.0	100.0
	Total	**4014**	**100**	**100**

Variable Type: numeric

NOTE: Please see the Methodology Report for information on which weights are appropriate for your analysis.

original_weight

Label: Qualtrics post-stratification weight based on age, sex, race/ethnicity, RUCC, education

Value	Label	Unweighted Frequency	%	Weighted %
0.069681-5.757624	-	4014	100.0	100.0

Variable Type: numeric
Note: Applying this weight will make your analysis demographically representative of the U.S. population of working-age adults based on sex, age, race/ethnicity [NH white, NH black, Hispanic, NH Asian, NH American Indian, and Other/2 or more races], educational attainment, and rural-urban continuum. Education was not incorporated into this weight for ages 18-24. The weight value for respondents ages 18-24 includes only the other four demographic measures.

final_weight

Label: Probability Sample Adjusted Weight

Value	Label	Unweighted Frequency	%	Weighted %
17.29771-840,206.3	-	4014	100.0	100.0

Variable Type: numeric
Note: Applying this weight helps to correct for the non-probability design of the NWS, as well as maximize national representativeness, based on the sampling design and weighting of the comparable National Health Interview Survey (NHIS) sample. Data from NHIS respondents ages 18-64 are used to first create a "design weight" (i.e., an estimated probability of selection for each survey respondent) and then calibrate this design weight to reflect differences in the makeup of the NWS and NHIS (see post-strata variables, below). Additional information on the creation and guidance on the use of this weight is provided in the 2021 NWS Methodology Report.

educ_grouped

Label: Education post-strata

Value	Label	Unweighted Frequency	%	Weighted %
1-2	-	4014	100.0	100.0

Variable Type: numeric
Note: This variable identifies the educational post-strata groups – no college degree and college degree – used to define the 12 post-strata (see "stratum_ID") incorporated in the calibration of the design weight. Additional information on the post-strata is available in the 2021 NWS Methodology Report.

age_group

Label: Age post-strata

Value	Label	Unweighted Frequency	%	Weighted %
1-3	-	4014	100.0	100.0

Variable Type: numeric
Note: This variable identifies the age post-strata groups – 18-32; 33-47; 48-65 – used to define the 12 post-strata (see "stratum_ID") incorporated in the calibration of the design weight. Additional information on the post-strata is available in the 2021 NWS Methodology Report.

marstat_grouped

Label: Marital status post-strata

Value	Label	Unweighted Frequency	%	Weighted %
1-2	-	4014	100.0	100.0

Variable Type: numeric

Note: This variable identifies the marital status post-strata groups – currently married and not married – used to define the 12 post-strata (see "stratum_ID") incorporated in the calibration of the design weight. Additional information on the post-strata is available in the 2021 NWS Methodology Report.

total_NHIS_weight

Label: NHIS survey weight total

Value	Label	Unweighted Frequency	%	Weighted %
6,562,005-36,001,378	-	4014	100.0	100.0

Variable Type: numeric

Note: This variable identifies the corresponding "known," weighted population totals for each post-strata based on the National Health Interview Survey data. Additional information on the post-strata is available in the 2021 Methodology Report.

stratum_ID

Label: Post-strata ID

Value	Label	Unweighted Frequency	%	Weighted %
1-12	-	4014	100.0	100.0

Variable Type: numeric

Note: This variable identifies the 12 post-strata groups used to calibrate the survey design weight, based on combinations of the education, age, and marital status post-strata groups. Additional information on the post-strata is available in the 2021 NWS Methodology Report.

weight1-weight200

Label: N/A

Value	Label	Unweighted Frequency	%	Weighted %
-	-	4014	100.0	100.0

Variable Type: numeric

Note: These 200 variables are the replicate weights used to estimate sampling variable for estimates based on the "final_weight." The bootstrapping technique used to develop these weights, as well as guidance on their implementation, is described in the 2021 NWS Methodology Report.
